

GIS PARCEL REPORTS

When using Beacon, parcel reports are referenced just as "Report". On this one page you will find the parcel report, assessor's card, photos & sketches and tax information about the parcel. It is a one stop shop!

1. After you select a parcel it will be highlighted. All reports are based off selected parcels.
2. On top of the map you will see an option for "Report". This is where you will access reports like parcel information, appraisal card, tax statements.
3. Not all parcels will have the all data present as some may be under review or not available for publications. Some parcels may not have a Tax Statement. Not all parcels are in Plats and some plats have names that are not linking to the plat report. Minor configuration issues may result in errors.
4. If you need a plat report. Plats are connected to the subdivision layer and can be retrieved by selecting a subdivision and pulling the available plat report.
5. Beacon should work fine with all browsers as well.
